

6 REASONS WHY **FIXED WIRELESS** IS THE IDEAL INTERNET SOLUTION

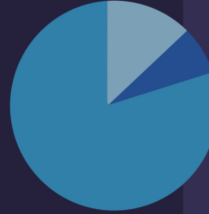

WWW.ONERINGNETWORKS.COM

6. BOUTIQUE CARRIER

Local service providers who offer fixed wireless solutions understand the importance of their customers' connectivity needs and emphasize the significance of personalized support.

1. INSTALLATION TIMEFRAME

Deploying fixed wireless is a simple process. Following the completion of a site survey, a fixed wireless connection can be up and running in a matter of days.

5.

ADJUSTABLE TERMS

Fixed wireless is available for short term and temporary projects in addition to typical long-term deals.

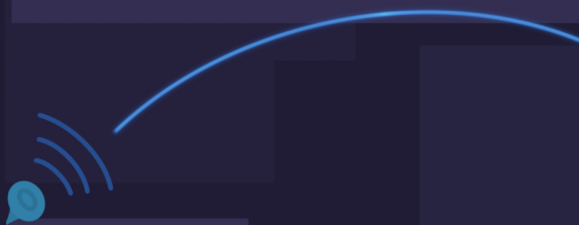

2. FLEXIBLE BANDWIDTH

Ranging from 1.5Mbps to 1Gbps, bandwidth can be turned up or down based on the organization's needs.

4. LOCATION TO LOCATION

A major advantage of fixed wireless is that it requires minimal equipment; a receiver dish and a PoP. This means both devices can easily be recalibrated should a change in location take place.

3.

RELIABILITY

Fixed wireless is not subject to the same issues associated with wired alternatives. There are no cables that could be cut or interfered with. Fixed wireless uses microwave technology to transfer data from point-to-point ensuring organizations remain connected and daily operations continue uninterrupted.
